

STREETPARK

Revive
your city

We are proud to have the possibility to take part in the appearance of our cities and villages – be it a small village or a parterre of a vibrant city. Our priority is to make you feel in public spaces like at home. STREETPARK offers **design products that awake your city.**

Every village or a city is equally important to us. We want our street furniture not only to be functional, but it should cultivate the public space as well. STREETPARK does not create the latest fads, but sophisticated solutions that are suitable for almost every locality. We do not want to attract attention by extravagance – we produce timeless street furniture. Furthermore, our customer will receive a **long-term value** in our products.

We have started designing street furniture under the brand name BLACKBOX design studio. Our projects started to be realized and as a result we have gradually extended our production into a full development and production of street furniture. Consequently, since 1/1/2018 the street furniture has been set aside under a newly created company called STREETPARK. It remains everything else that you were used to and why you got to like our products. Functional design and quality continue to be our priority.

FOUNTAINS

BARRIER PILLARS

DESIGN

We design street furniture of the 21st century. Our customer will receive a long-term value in our timeless products.

FUNCTIONALITY

Beautiful is functional. We produce street furniture that serves its purpose perfectly: relaxation, a shelter against adverse weather conditions; information panels, navigation of visitors and last but not least our products contribute to maintain cleanliness of public spaces.

FLEXIBILITY

Design of our products enables their ubiquitous use. If it is really necessary the size, colours or materials can be adjusted so that the street furniture complies with your requirements.

USE

The aesthetic value of the place is completed with our street furniture. Since we do not create the latest fads, but sophisticated solutions that are suitable for almost every locality, the street furniture STREETPARK can be used in historical city centres as well.

QUALITY

Only products which are made of quality materials, have an adequate technical design and are planned with a lot of attention to detail can fulfil their function. Quality is our priority since it can, when correctly maintained; ensure long-lasting durability of the street furniture.

OPENNESS

Being one of the leading companies in the field we cannot rest on our laurels. We are therefore open to new ideas not only from designers and architects but also from investors. Only through co-operation can the development of that field be pushed forwards.

We are aware that **qualified and enthusiastic specialists** can **awake your CITY** through their products.

DESIGN AND PRODUCTION

The design of our products enables their ubiquitous use. If it is really necessary, the size, colours or materials can be adjusted so that the street furniture complies with your requirements.

Even though the latest CNC technologies are used when producing our street furniture, we still have to make use of a huge amount of handwork. We are particular about dexterous workers and we provide an expert assembly service when installing the finished product at the place of destination.

BENCHES

LITTER BINS

BICYCLE RACKS

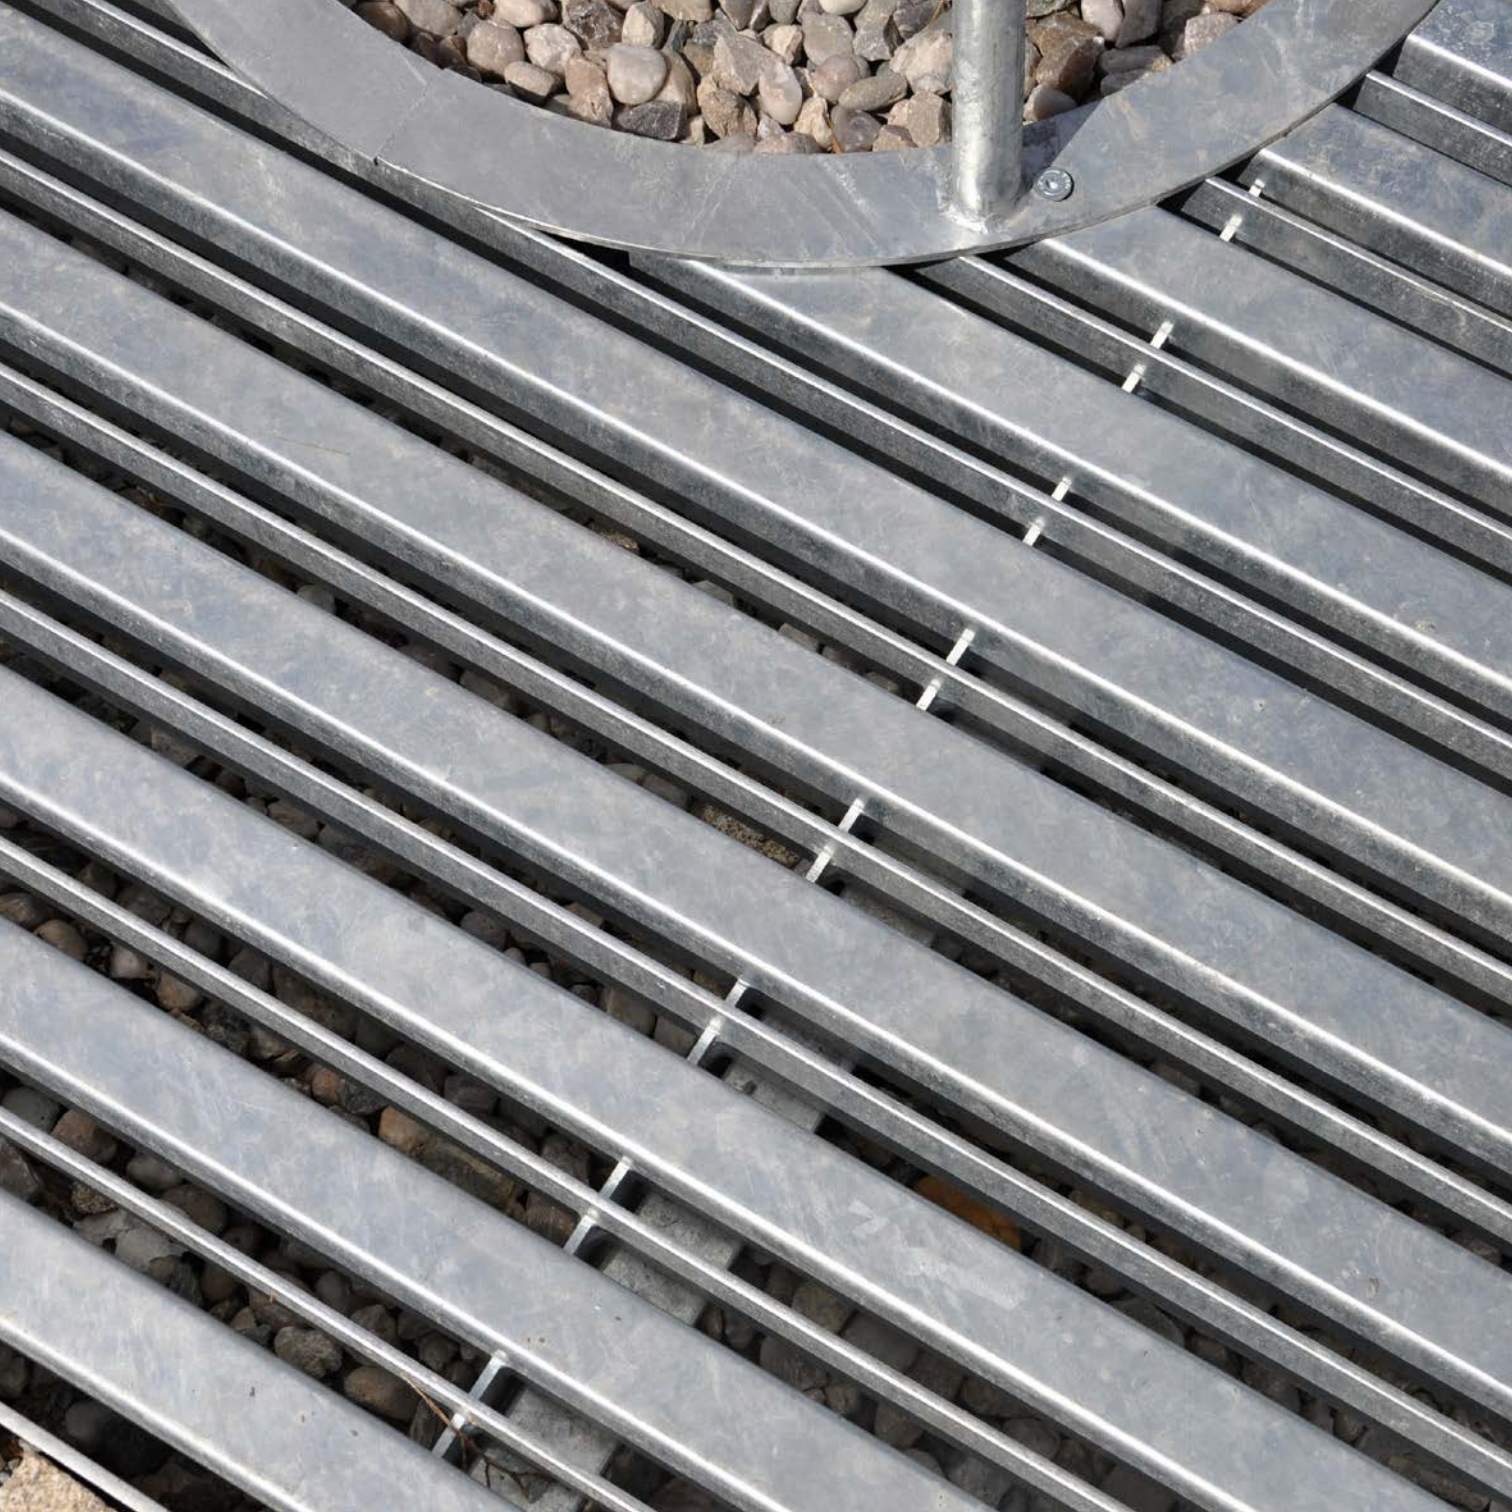

BUS STOP SHELTERS

OTHER

There is no small project. We make the same effort to deliver complete street furniture for a big city as well as to an installation of a few benches in a small town.

NEWS OF 2018

Wi-Fi and USB charging integrated
into some of our model of benches
and shelters
